

## Navigation to Other SchoolData.net Applications

### Application Navigation

When inside an application, you can navigate to any other SchoolData.net application. The icons associated with each application appear in the navigation bar, or bundle selector, at the top of the application.

On the left side of the bundle selector, just above the application name, you'll find the icon for the SchoolData.net bundle of applications you are currently in; next you'll see application icons for all the applications in the bundle.

For instance, if you are in the Homeroom Dashboards application, you'll see the icon for the Dashboards and Distributions bundle, then application icons for Homeroom Dashboards, Homeroom Classic, Student Group Manager, Student Data Grids, Risk Indicators and Distribution Manager, which are all the applications in the Dashboards and Distributions bundle.

### Bundle Navigation

To navigate to an application in a different bundle, you'll need to look to the right side of the header navigation bar for the list of icons for all other SchoolData.net bundles of applications.

Depending upon which application you are currently in, those may include:

-  Human Resources
-  Admin
-  High School and Beyond
-  Alternate Learning
-  Dashboards and Distributions
-  Classroom
-  Data Extracts
-  Attendance Compliance
-  Student Plans

If you hover over a bundle icon, it will show you a list of applications in that bundle, along with a description and a 'Learn More >>' link that will open the application in another browser tab.

APPLICATION BUNDLE  
**DATA EXTRACTS**

Rp

**Reports**

Our Reports application is designed to help you generate form letters, produce student progress reports, and combine historical data with text to deliver meaningful reports to stakeholders in your district.

LEARN MORE >>

Ch

**Charts**

Today, education professionals have access to more and more data providing in-depth information on student, teacher and school performance. Our new Charts App is designed for you to share your data visually in a simple, easy-to-understand format.

LEARN MORE >>

Db

**Chart Dashboards**

This app provides a way to create your own custom dashboards to focus on collections of data around specific themes. Create dashboards for others to use with their data, as well as district dashboards for common views across grade levels, schools, or the district.

LEARN MORE >>

Kp

**KPIs**

Gain a common perspective and make informed decisions through a series of Key Performance Indicators (KPIs). They present charts in dashboards, combined with context and narrative to help superintendents and school boards make steering decisions for their district.

LEARN MORE >>

Nl

**Notification Letters**

Notification Letters is an integrated solution to create, manage, and track notification letters sent to parents electronically or manually.

LEARN MORE >>

Ta

**Data Tables**

Data Tables is a fast and easy method to generate multiple data sets using basic data input selections. Similar to Data Grids, Data Tables are comprehensive spreadsheets made up of data columns to present this information.

LEARN MORE >>

Si

**School Improvement**

View Schools individually on seven academic measures and compare the desired subgroup population's performance against all students as a whole.

LEARN MORE >>

If your district currently subscribes to the application it will be available for use. If not, you'll see some information about the application and directions on how to request a demonstration.

For a full list of our application bundles, their applications, and the icons associated with them, visit our website at [SchoolData.net](https://www.schooldata.net).
