SchoolData.net
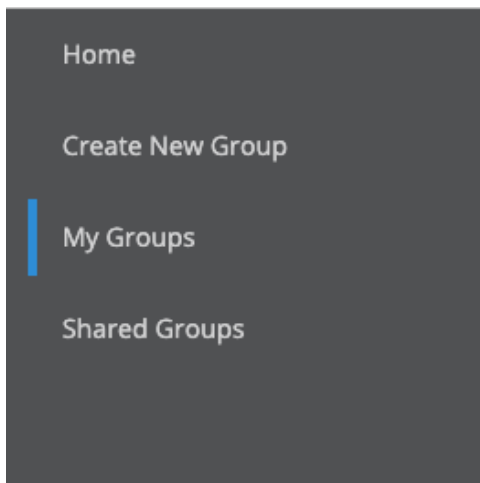

Student Group Manager: Overview

Introduction to Student Group Manager

Student Group Manager allows you to filter through all the students in your school district and designate groups based on particular criteria. These groups can then be used in Homeroom Dashboards or to provide a data set for applications like Reports or Data Tables. In addition, the student Group Manager makes smart student groups, so the group will routinely update and recalculate which students to include based on the given filter rules.

Navigation

The Student Group Manager sidebar has several pages listed on it.

- The Create New Group page is where you will go to define and create new student groups. For a more detailed description, see the article here.
- The My Groups page is where you will find all the student groups you have made. You can manage, edit, or delete them from this page. For more detail, see the article here.
- The Shared Groups page is where you can find groups you didn't make but have access to. For example, you can select a filter to see district or school-wide student groups like "All High School Students" or "5th Grade Students at Creekwood Middle School".
