
2025.10.15 SDS Release Notes

Date: October 15, 2025

Version: 2025.10.15

Homeroom

New Features

- Created components for a **Superintendent's Dashboard**:
 - A data table showing the **Previous Day's Attendance Rate** by campus/building, with filtering by school and district.
 - A card-view data table displaying **Student Counts By Service Type And Plan**, with clickable cards to view student lists and filtering by school and year.
 - A combo chart to visualize the **Number Of Students Earning Failing Grades By Grade Level**, with flexible filtering options.
 - A bubble chart and pivot table to display **Discipline Event Counts By Grade Level**, including detailed breakdowns by incident frequency.
 - A donut chart to the dashboard showing the **Prior Day's District Attendance Rate**, with present/absent counts and interactive labels.
- Added the following features to the **Student Dashboard of Homeroom**:
 - Printable report for current year gradebook data: **Student Current Year Gradebook Report**, which includes class codes, grades, and missing assignments.
 - Printable attendance report: **Student Attendance Report**, which includes absences and tardies by type and period.
 - Printable assessment report: **Student Assessments Tests Report**, which includes test details, scores, and performance levels that can be configured by school year(s), scope, families, and subject areas.

Improvements

- In the **Student Dashboard**, the following features were modified.
 - Replaced the "**Add Documents**" button with the "**Manage Documents**" button, linking directly to the **Student Details Manager**.
 - Replaced the "**Add Observations**" button with the "**Manage Observations**" button, linking directly to the **Student Details Manager**.

CTE

New Features

- In the student's **Credential Status**, users can view a student's CTE status as either a **Concentrator** or a **Completer** (displayed as "yes" or "no").

Early Warning Module

New Features

- In the **Data Administrator role > Manage Risk Indicators**, added an HTML content block with a "**Request Recalculation**" button that queues a recalculation job if none exists.
- Data Administrators can now **Manage Risk Indicators** using a new, user-friendly data table. The updated interface allows direct in-table editing of minimum and maximum values, color selection, and risk level details.
 - Previous restrictions on value ranges have been removed, providing greater flexibility in defining student risk categories (no, low, medium, high).
- Educators and Teachers can now upload and attach files to **Student Notes** in the Early Warning Module (View EWM Profile).

Intervention Plans

New Features

- When a **goal** is deleted from an intervention plan, all associated goal strategies are also removed. This ensures data consistency and prevents orphaned strategy records.
- Educators can now select **multiple subject area strategies** for each goal in an intervention plan. The goal edit form and underlying data model have been updated to support multi-select, allowing for more comprehensive strategy tracking.

Improvements

- Intervention Plan reports now indicate when a student's goal has been achieved. Educators can mark goals as achieved, and this status is displayed in both the plan management interface and printed reports, providing clearer tracking of student progress.
- The intervention plan goals data table now displays all selected subject area strategies for each goal, reflecting the new multi-select capability and improving visibility for educators.

Bug Fixes

- Fixed an issue where users could not filter to **100% in Attendance Chart Validation Workbooks**. Users can now correctly filter for students with 100% attendance in all relevant data tables.
- Resolved a problem where clicking on **System Created Student Groups** in the Teacher role did not open the expected modal. The modal now opens as intended for groups by Teacher, School, and District.
- The **Dashboard Editor** now prevents saving dashboard arrangements that exceed the supported 12-column layout, ensuring only valid configurations can be saved.
- Fixed an issue where clicking status icons from the **Monitor page in Evaluations** incorrectly navigated users to the Evaluator persona page. Monitors are now directed to the correct Monitor view.
- Corrected rendering issues in **Attendance % by Threshold charts** (Student List, By School, By Grade Level, By Gender, By Federal Race, By Program/Service Type), where bars were incorrectly stacked and overlapped. Charts now display grouped categories and correct colors.
- Fixed the **ALE - No Scanner History Data Extract** so that reports now generate as expected and include the correct students.
- Parents are now correctly prevented from dropping classes when **Parent Enrollment Lock Dates** are set, enforcing enrollment restrictions as intended.
- Fixed an issue where individual student reports in the **Standard Student Assessment Profile Data Extract** included all students instead of just the selected student. Each report now contains only the relevant student's data.
- Addressed an issue where user selections in the **Data Settings Form for Multiple Areas of Risk** were not retained or displayed upon returning to the page. Selections are now properly resurfaced.
