
2026.03.25 SDS Release Notes

Date: March 25, 2026

Version: 2026.03.25

Homeroom

New Features

- Added **Grades - Student Class Term Grades by Course Chart** to **Data Extract > Charts** in the left navigation menu to help educators quickly see how students performed across courses and terms.
- Added **Grades - Student Gradebook Grades by Course** to **Data Extract > Charts** in the left navigation menu to help educators see how students are performing before term grades are posted, for specific courses and/or terms.
- Added **Attendance - Attendance Rate by Day of Week (Data Extract)** to **Data Extract > Charts** in the left navigation menu to provide a comparative view of annual attendance rates to identify participation trends by specific weekdays or student groups.

Improvements

- Improved **Prior Attendance Rate** views and container labels to maintain accuracy when attendance data arrives with a delay (e.g., during MDH staging scenarios). The labels no longer assume a “prior day” when jobs run late, resulting in greater clarity for users reviewing attendance metrics.
- The **Leadership Dashboard** views now correctly respect all page-level **filters** and data **settings**, ensuring leaders consistently see accurate, filter-aware information across all views.
- The **View as KPI column filter** in the **All Assessment Tests data table** now functions as intended. Ensuring that the filtering correctly displays only assessments marked as KPIs.
- Updated the **Gradebook Class Grades (Data Extract)** in the **Data Extract > Data Tables** in the left navigation menu with options to:
 - Exclude withdrawn students
 - Include ungraded standards/classes
 - Select specific terms

These additions provide greater flexibility, ensuring extracted data can be filtered as needed.

ALE

New Features

- Introduced new settings in the **Data Administrator > Configure Settings > Default Settings/Values > Manage ALE Class Designations** page (formerly Create Weekly Contact), providing greater flexibility when defining class designation defaults. **Improvements**
- Centralized all class registration settings into a single location for easier access and configuration: **Registrar > Class Registration > Class Registration Settings**
- Refined how class costs and learning credits are managed in the **Create Class and Manage Class** pages:
 - Renamed **Learning Credit Cost** to **Class Cost**
 - Renamed **Learning Credit Cost Per Meeting** to **Class Cost Per Meeting**
 - Added a new field: **Learning Credit Amount**
 - Implemented validation preventing simultaneous use of **Class Cost** and **Class Cost Per Meeting**
- Updated how **Class Costs** and **Class Costs Per Meeting** ledger transactions are handled when class costs, or enrollment changes, are made. Updated class enrollment workflows:
- The **Class Registration** and **Class Request** processes now utilize the **Learning Credit Amount** field, allowing programs to weight classes when parents enroll students or submit class requests.
- Expanded reports are available to assign in **Data Administrator > Data Extracts > Reports** in the left navigation menu, then click the **Assign Reports** tab at the top of the page:
 - **ALE – Parent - ALE Class Schedules** (designed for Parent role only)
 - **ALE Student Learning Plan Conflicting Classes**
 - **ALE Library Checked Out Items**
- Moved **Certificated Teacher** key tasks to a new **Monitor > Monitor Key Tasks** in the left navigation menu.
- Removed the **Delete Class Meeting** option for all roles to ensure accurate class cost adjustments and class meeting management.

Success Plans (formerly Behavior Intervention Plans)

Improvements

- Screenview titles and navigation labels in the **Success Plans** application area were reviewed and updated for clarity and consistency, aligning with the new “Success Plans” name.
- Left-hand navigation items for **Success Plans** were reorganized and/or renamed to better reflect the new “Success Plans” name.
- Labels, layouts, or underlying logic for **Success Plan-related reports** were updated to match the new “Success Plans” name.
- **Success Plan data tables** were adjusted to match the new “Success Plans” name.

- Static/HTML content blocks were renamed to match the new “Success Plans” name.

CTE

Improvements

- Added a **Documents** subpage (tab) to the **CTE Student profile page**.
- Added **Demographics** subpages (tabs) to the **Programs of Study** main page. (**Students Enrolled in Classes, Students with Earned Credit, Concentrator Charts**)
- The **Programs of Study data table** now shows **year-by-year class associations** with simple visual indicators.
- Added a **Demographics** subpage (tab) to the **Industry Credentials** main and detail pages.
- Updated labels and navigation from **Industry Recognized Credentials** to **Industry Credentials** throughout the application.
- The **Perkins Indicator detail page** now includes a **Demographics** subpage (tab) that shows the numerator, denominator, and district side by side for key student groups.
- Added a **Demographics** subpage (tab) to the **Work-Based Learning** main and detail pages.
- Manage **Work-Based Learning Activities** now shows **School Year columns** indicating where classes are associated.
- Updated the **Add Class to Program Course selector** to be CTE-focused, with richer class details and set-based filtering.
- Added an **Edit** action for **Program Course records** that are not tied to a state, allowing updates to course name, code, and designation.
- **Program Area/Category, Program, and Program Course pages** now share a consistent **School Year selection**.
- The new **Initialize Targets for New Year button** copies indicator targets from the last year to the current year, only where targets do not yet exist.

Four-Year Plans

Improvements

- The **Four-Year Plan Courses data table** for **Data Administrators** now exposes more course attributes and supports inline editing. This streamlines the process of reviewing, updating, and maintaining course details from a single place, eliminating the need to navigate multiple configuration screens.
- The **Configure Course row action and form** were updated to accommodate expanded course data. New and existing fields are now correctly initialized and saved, ensuring the form remains synchronized with the data table.
- When deleting an **elective plan slot row**, a confirmation prompt is now displayed to the user. This feature helps prevent accidental deletions and supports safer editing of student plans.

Bug Fixes

- Fixed an issue where user-saved **data table column configurations** would revert to defaults after resizing the browser window or navigating away and returning to a page. Saved layouts now persist as expected.
- Fixed an issue in which **AI Insights** sometimes incorrectly reported: “no data to summarize”. Summaries are now generated and displayed as expected when sufficient data is available.
- In **CTE** class selection workflows, confusing interactions between the **School Year in Data Settings** and the **School Year column filter** have been corrected. Both features now work together more predictably, reducing confusion when narrowing down classes.
- **ProDev**: Fixed a spelling/wording error on the **Clock Hour Approval Report** so the content reads correctly.
- In **ALE**, an issue was resolved that prevented users from saving the end date when creating **Class Term Date Ranges** for future school years.

Other Improvements

- In **Pro-Dev**, the **Clock Hour Earned Credits data table** in **Data Extracts** now includes an **SIS Key column**. This simplifies the process of joining earned credit records to SIS data supporting downstream imports or reporting needs.
- In the **Early Warning Module**, filters were added to the **Attendance Summary** views, allowing users to filter the displayed data by attendance type.
