

New Suite Application Navigation (Connect)

Here, you will learn how to navigate and switch between applications in SchoolData.

1. Click the new Site Navigation icon (this replaced the map icon) next to the SchoolData.net logo in the top left to view all available applications, organized by bundle. The icon has been replaced, but the process for launching an application is still the same.

2. A modal/popover window will appear. Select the Application Bundle on the far left, then move to your right to select Applications, User Roles, Navigation Items, and Page Details as needed.
3. Click the Launch button. (E.g., to find Homeroom Dashboards, click Dashboards and Distributions > Homeroom Dashboards > Launch)

5. Use the new vertical application tray to the left to switch between applications instead of using the site application button.
6. Expand or collapse the entire left navigation tray to view more as needed.
