Show me students in grades 3-5 who are below standard on Math assessments and also have attendance below 90% this year. NA

Show Work

I'll check the assessment data structure and attendance data to build this query. I need the full-year term literal, and need to check what "below standard" Levels/MetStandard values look like for Math assessments. Let me check both in parallel. Good — "MetStandard = 'No'" reliably captures "below standard" across the various Level labels used by different test vendors. Now let me pull the combined results, scoped to grades 3-5, currently enrolled, Math assessments not meeting standard, and full-year attendance below 90%. The grade labels match what I used, and the query ran successfully but was truncated at 100 rows. Let me get the full count.

I found **219 currently-enrolled students in grades 3-5** who both scored below standard on a Math assessment this school year (2026-27) and have a full-year attendance rate below 90%.

Here's a sample of the most severely impacted students (sorted by lowest attendance):

Student	Grade	School	Attendance Rate
...	...	...	...
