Why Connect AI?

Districts already have the data, but getting answers still takes time. Combining attendance, behavior, and academic data into a clear picture is still difficult. Many staff don't have time or training to build reports or navigate dashboards. This limits how often data is used in day-to-day decisions.

Connect AI changes that:

- Identify student needs earlier and act sooner, before patterns become crises.
- Leaders can answer important questions with real data quickly.
- More staff can access and use data without needing extensive training or relying on a data team.
- Staff can instantly convert any query result into a trackable MTSS intervention group, closing the loop between insight and action in one step.

Ask a question	Get a clear, data-backed answer quickly	Take action immediately

Unlike dashboards that show you data, Connect AI performs the analysis. It weaves together attendance, behavior, assessment, and demographic history into a complete student story—revealing the WHY behind the WHAT. Since we use data that already exists in your district's own SchoolData warehouse, it is the same data that your team already trusts. By showing you where every answer comes from, your staff can validate before they act.
