Who Can Use Connect AI?

How Connect AI Supports All Staff

Connect AI is for every educator, regardless of their level of data expertise. It is built into the school data platform, and can be easily accessed by any user so you can stop data-mining and start intervening. If you can send a text, you can use Connect AI. Below are examples of how real educators in different roles use Connect AI:

Teachers & Instructional Staff

Make data-driven differentiation as easy as asking a question, no filters, no training, no anxiety.

- *"How are my students performing on current assessments by subject area and which students are below benchmark and need additional support in reading or math?"*

Principals & Building Administrators

Turn your building's data into a Monday morning action plan without needing a data team to produce it.

- *"How many of my students are chronically absent this year, and which grade levels are most affected?"*

School Psychologist & MTSS Coordinators

Do in seconds what used to take hours: peer comparison groups, cross-domain histories, and ROI trends.

- *"Show me students at my school who are currently receiving Tier 1 support only but are showing two or more risk indicators who should be considered for a more intensive intervention?"*

Curriculum & Learning Leaders

Measure the instructional ROI of every program your district funds — and defend what works with evidence.

- *"Which schools or grade levels are showing the strongest growth in assessment scores this year?"*

Superintendents

Walk into any board session or legislative audit with clear, data-backed answers about what your district is doing.

- *"Which schools are showing the strongest overall student outcomes this year?"*
